

Activity: Secure the Online Retailer – Role-Based Scenario

To attempt to secure the online retailer ByteCart, there must be a multifaceted approach.

For employees:

- employee training - Administrative, Preventive
- implementing security policies - Administrative, Preventive
- procedures for reporting - Administrative, Corrective
- access management - Administrative, Preventive

For employee acct.:

- Multi-factor authentication (MFA) - Technical, Preventive
- Use of strong password requirements - Administrative, Compensating

For the mobile app.:

- Multi-factor authentication (MFA) - Technical, Preventive
- Encryption - Technical, Preventive
- Use of strong password requirements - Administrative, Compensating

For payment system:

- Intrusion detection system (IDS) - Technical, Detective
- Encryption - Technical, Preventive
- Log monitoring tools - Technical, Detective

For customer database:

- Intrusion detection system (IDS) - Technical, Detective
- Encryption - Technical, Preventive
- Implement least privilege - Administrative, Preventive

Hopefully, with this layered approach, this company will have a robust security infrastructure through a defense in depth, to attempt to prevent, deter, and mitigate any threats, or attacks to their company. Doing this in conjunction with back up systems, employee training, and establishing a culture of security awareness. Our job is to prevent damage, and loss of data to

would be attackers. If ByteCart were to suffer an attack exposing customer, or employee data, then their reputation would suffer as customers might not engage with them, and they could be at risk of financial fallout.
